Suspension is the system of tires, tire air, springs, shock absorbers and linkages that connects a vehicle to its wheels and allows relative motion between the two. Suspension systems must support both road holding/handling and ride quality, which are at odds with each other. The tuning of suspensions involves finding the right compromise. It is important for the suspension to keep the road ...

The settings will most likely change before the car gets out of the shop. Worn suspension and steering components are also a safety issue, so take care of these things as a matter of course. A worn steering gear won't affect the alignment between the two front tires, but it will keep the driver from enjoying the benefits of the alignment.

In automotive engineering, toe, also known as tracking, is the symmetric angle that each wheel makes with the longitudinal axis of the vehicle, as a function of static geometry, and kinematic and compliant effects. This can be contrasted with steer, which is the antisymmetric angle, i.e. both wheels point to the left or right, in parallel (roughly).). Negative toe, or toe out, is the front of ...
