Global Wind Patterns Name: \_\_\_\_\_

Period: \_\_\_\_\_ Date: \_\_\_\_\_ Essential

Question: How do I describe the global wind patterns? The region of Earth receiving the Sun's direct rays is the equator. Here, air is heated and rises, leaving low pressure areas behind. Moving to about thirty degrees north and south of the equator, the

## **Global Wind Patterns - Winston-Salem/Forsyth County Schools**

There are three pairs of major global wind systems, or wind belts: trade winds, westerlies, and polar easterlies. Trade winds are wind belts that blow from 30° latitude almost to the equator. They curve to the west as they blow toward the equator. Westerlies are wind belts that are found between 30° and 60° latitude.

Patterns: Air patterns are analyzed and used to predict weather systems. 2.) Cause and Effect: The effect of Earth's rotation causes air to move. The Sun heats the Earth unevenly, causing convection currents. 4.) Systems and Models: The movement of air along with Earth's rotation causes convection currents to interact, creating multiple wind patterns. The model used to display wind patterns illustrates interactions of moving water air, sun, and Earth's rotation.
