accepted solution in some building codes, in regions where the technique has historical precedent. A good deal of testing and modeling of rammed earth walls has been done around the world, and the available data is usually sufficient to justify the use of rammed earth as a load-bearing wall for one- and two-story structures.

construction guidelines

David Easton, a rammed earth architect in California, has adapted rammed earth construction into a technique he calls PISE. It's an acronym for pneumatically impacted stabilized earth. Instead of building two-sided forms and ramming earth into them, Easton takes a pressure hose and sprays the earthen mixture
