Abstract. In this chapter component reliability and system reliability assessment methods used in structural engineering are discussed. The first-order reliability method (FORM), which has evolved from the advanced first-order second-moment method (AFOSM) is explained, together with the second-order reliability method (SORM), which takes into account curvature of failure surface at the design ...

Reliability is also used as a probabilistic measure of structural safety. The reliability of a structure is defined as the probability of complement of failure $\{\text{Reliability}\} = 1 - \{\text{Probability of Failure}\}$. The failure occurs when the total applied load is larger than the total resistance of the structure.
